

Security Module

Set MARSEC level for each port and upload security documents such as ISPS Declaration and Declaration of Security for the port agency's easy access.

1. Navigate to the Security module in your Modules Dashboard.
2. Select the MARSEC level the vessel will be operating on during the call. The port agency assigned to the call will have access to read the MARSEC level selected. The MARSEC level will be used in the Reports Module to produce the security reports.

■ Security Details

Marsec Level

Save

3. Upload the security documents (ISPS Declaration and Declaration of Security DoS). The port agency will have access to download the documents. The recommended process is for the Security Officer to produce the security documents manually or with the Reports Module, and then upload the finalized documents on the below section.
